Pune, Maharashtra, India

OBJECTIVE

Motivated and detail-oriented engineering student specializing in software engineering, cloud-based application development, and collaborative Agile workflows. Skilled in building production-level features, integrating modern development practices, and delivering impactful real-world software solutions. Proficient in AI-ML, Web Development, Python, DBMS, AWS, and UI/UX design.

EDUCATION

Vishwakarma Institute of Information Technology

Bachelor of Technology - Electronics & Telecommunication Engineering

Pune, India

2023 – Expected 2027

- Courses: Object Oriented Programming (OOPs), Data Structures
- CGPA: 8.84

EXPERIENCE

Internship - SmartLeaven Technologies Pvt. Ltd.

June 2024 – July 2024

Pune, India

- Developed a chatbot using Generative AI with a focus on delivering accurate and context-aware responses.
- Contributed to production-ready software features, following Agile development routines (sprint planning, stand-ups).
- Applied research-before-build approach to evaluate NLP tools and frameworks.
- Built backend services in Flask and Keras, designed and implemented responsive UI in HTML, CSS, Tailwind CSS, and Figma, ensuring maintainable code and best practices.

Internship - Baellchen Technology

Sept 2025 – Dec 2025

Pune, India

- Developed an AI-powered retail demand forecasting system using machine learning models including XGBoost and Transformer-based architectures.
- Designed and implemented an end-to-end data science pipeline covering data preprocessing, feature scaling, model inference, and performance evaluation.
- Achieved high forecasting accuracy with an average error of approximately 3% MAPE on real-world retail datasets.
- Built and deployed an interactive analytics dashboard using Streamlit, enabling users to upload datasets, visualize demand trends, and compare actual vs predicted demand.
- Worked with Python, Pandas, NumPy, Scikit-learn, TensorFlow/Keras, and visualization libraries to deliver a production-style ML application.

PROJECTS

Smart City Guide Application | *Java, MySQL, Google Maps API, GUI*

Jan 2024 – May 2024

- Developed an interactive city guide using Java, MySQL, and Google Maps API, delivering production-level mapping and payment simulation features.
- Collaborated with peers to design a robust GUI and manage SQL-based user profiles.

Smart Eco Commute Web App | *React, Tailwind, Node.js, MongoDB, Google Maps API*

Apr 2025 – May 2025

- Followed Agile methodology to develop a full-stack web app for eco-friendly ride-sharing with user authentication and real-time route matching.
- Integrated secure backend with a clean, responsive UI and map-based features.

Contact Manager Web App | *React, Tailwind CSS, Node.js, PostgreSQL*

Jun 2025 – Jul 2025

- Built a Kanban-style contact management app with category-based organization and drag-and-drop UI.
- Implemented dark mode, search/filter, and RESTful backend for dynamic data handling using PostgreSQL.

Face Authentication System | *Python, OpenCV, FaceNet, Mediapipe, Deep Learning* Oct 2025 – Nov 2025

- Developed a real-time face authentication system using FaceNet embeddings and cosine similarity for accurate identity recognition.
- Implemented blink-based liveness detection using Mediapipe FaceMesh to prevent spoofing and photo-based attacks.
- Integrated live webcam feed with OpenCV and logged IN/OUT attendance records to structured CSV files.

Fault Detection in Power Grids | *Embedded Systems, EMF Sensors, POC Hardware* Jan 2024 – May 2024

- Designed a novel magnetic flux-based method to detect and classify electrical faults in transmission lines.
- Built and tested POC sensors to report fault location and type to a central unit.

TECHNICAL SKILLS

- **Languages:** Java, Python, C/C++, JavaScript, SQL, HTML/CSS
- **Web & Cloud Technologies:** React.js, Node.js, Tailwind CSS, Flask, REST APIs, AWS(Basic)
- **Databases:** SQL, MySQL, MongoDB, PostgreSQL
- **Development Practices:** Agile/Scrum, Git-based Collaboration, Code Reviews
- **Testing:** Unit Testing, Integration Testing
- **GUI Development:** Tkinter, Java Swing, JavaFX, AWT
- **Data & ML Libraries:** NumPy, Pandas, Matplotlib, NLTK, TensorFlow, Keras
- **Tools & Platforms:** Git, GitHub, Figma, Postman, Power BI, Tableau, VS Code, IntelliJ, PyCharm, Eclipse, Google Colab, OpenAI (ChatGPT), Perplexity AI, Streamlit, Hugging Face, Kaggle, Render

[P.1] Dhawal Thombare, et al. (2025). *A Fault Detection System for Power Distribution Lines*.
Filed with the Indian Patent Office.

Application No.: 202521044840 A **Country:** India

Date of Filing: 09/05/2025 **Publication Date:** 06/06/2025

ACHIEVEMENTS & CERTIFICATIONS

Earned **Google Cloud Generative AI Skills Badges** through Google Cloud Learning Platform – demonstrating applied knowledge in Generative AI, cloud services, and modern AI tools.

Qualified PPT round in **Smart India Hackathon (SIH) 2024**, national innovation challenge by the Government of India.

Secured position in **Top 7** at departmental-level Hackathon.

Participated in **Designing the Future** UI/UX Hackathon, organized by The Design Company at **NIT Patna**.

Completed **TATA Data Visualization: Empowering Business with Effective Insights** certification.

Completed **Accenture Data Analytics and Visualization Job Simulation** via Forage.

Completed **Python for Beginners** course on Udemy.
